

# Science

## Pre-sixth form tasks in Biology, Chemistry and Physics

Instructions:

1. Complete all the maths questions. This task ensures you are confident in the type of maths skills that will occur in the A-level content for your subject.
2. Select two areas of interest from the research tasks. All topics link to A-level content and provide a more detailed understanding than you will have studied at GCSE. Pick the two that interest you the most and follow the specific instructions.

*We look forward to seeing you all in September with the completed work!*
